

*Excellence in Electronics***TYPE**
CK6932

The CK6932 is a filamentary type subminiature pentode of low filament current designed for service in portable equipment. The suppressor grid may be used as an independent control electrode for circuits such as gated amplifiers. The flexible terminal leads may be soldered or welded directly to the terminals of circuit components without the use of sockets. Standard inline subminiature sockets may be used by cutting the leads to a suitable length.
